Steps to Connect and Use ezCast:

Step 1

You should connect your ezCast with your TV; and power it on. then you will see the following menu in your TV

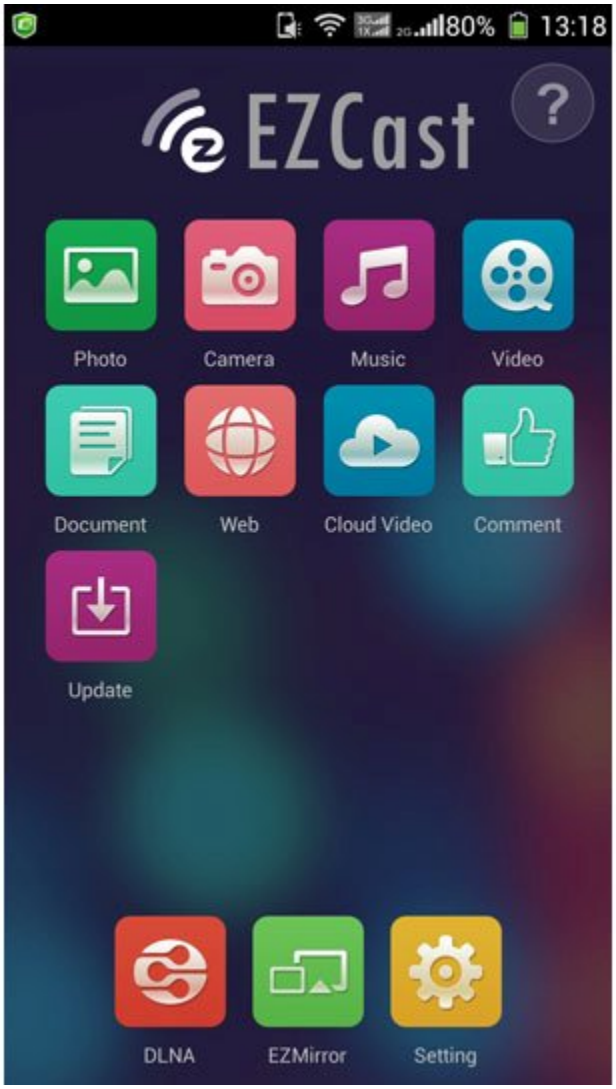
Step 2

Download the EZCast App from Google Play Store, just search ” EZcast”, and download & install the app.

Step 3:

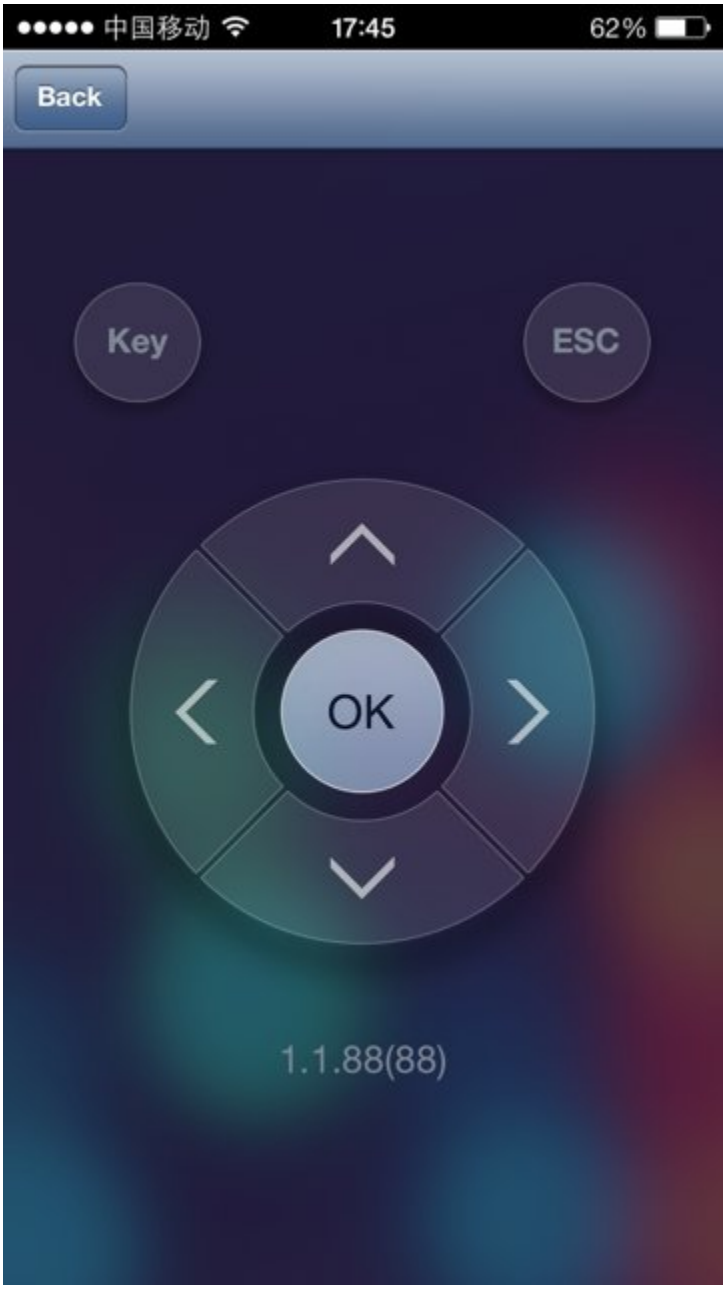
Connect your android device wifi to ezCast, the ezCast SSID should show on your TV, it is like ezCast-XXXXXX, and the password is also in your TV screen

Step 4, Now you can go to open the EZcast app on your android device, you will see the following menu on your smartphone or tablet:



and then you should click “setting” and use your android smartphone or tablet as remote control for ezCast . so , after you click setting, you will see the following in your TV

at the same time, you will see the following in your android smartphone or tablet:



Use the arrow to control the menu on TV, you should make your ezCast to connect to internet, move the menu to Internet, and choose from the AP list, enter the password.

You also can set the screen resolution, and language setting on this menu, also the OTA update is also in this setting.

Step 5 : After finish the set up, you can press the back button on your android device, now you are ready to use.

On Android device, ezCast offer three mode to you:

1 Ezcast Mode;

2 DLNA Mode

3 EZMirror Mode (it is the miracast mode)

Let’s check one by one:

1 Ezcast Mode. this is a great mode for send your local files including Photos, Music, Videos, word, pdf,excel, ppt to your big TV. It has better performance than DLNA when play different video format. Let’s check it now.

Once the connection is successful, EZCast function turns on and you can see several useful features shown in your Android device.

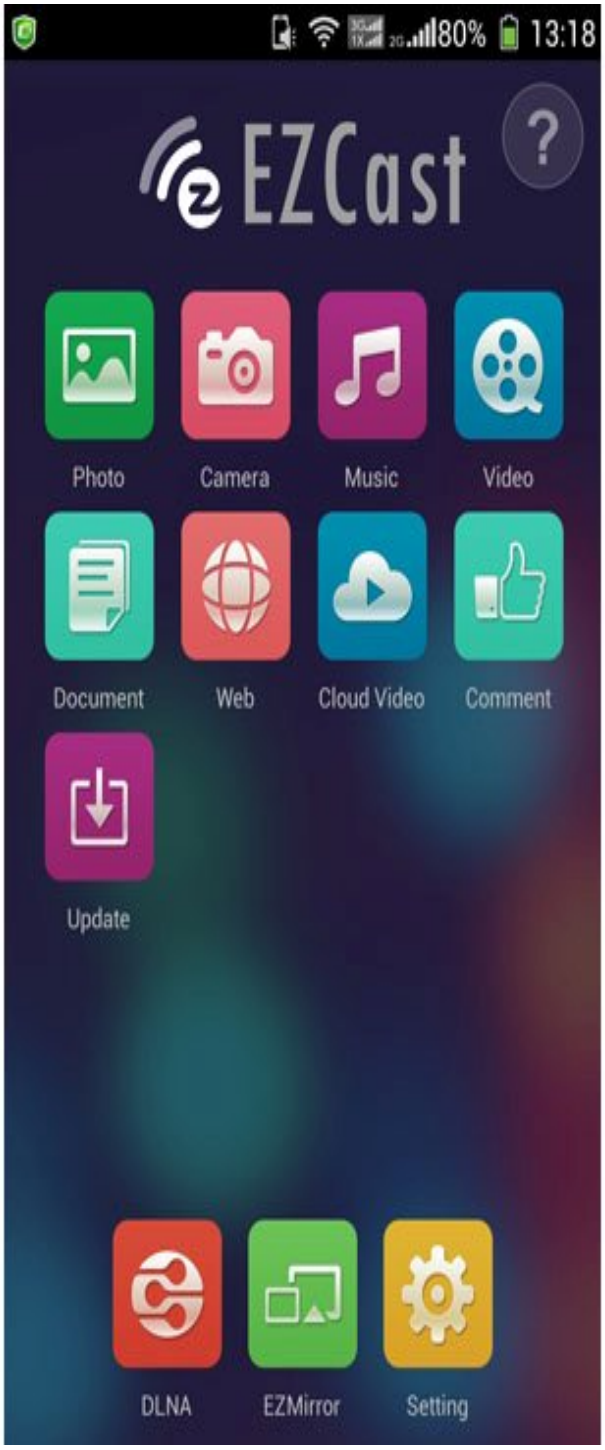


Photo function, through it, you can mirror your photos in your Android device wirelessly to the display(i.e.TV) by clicking the thumbnails.

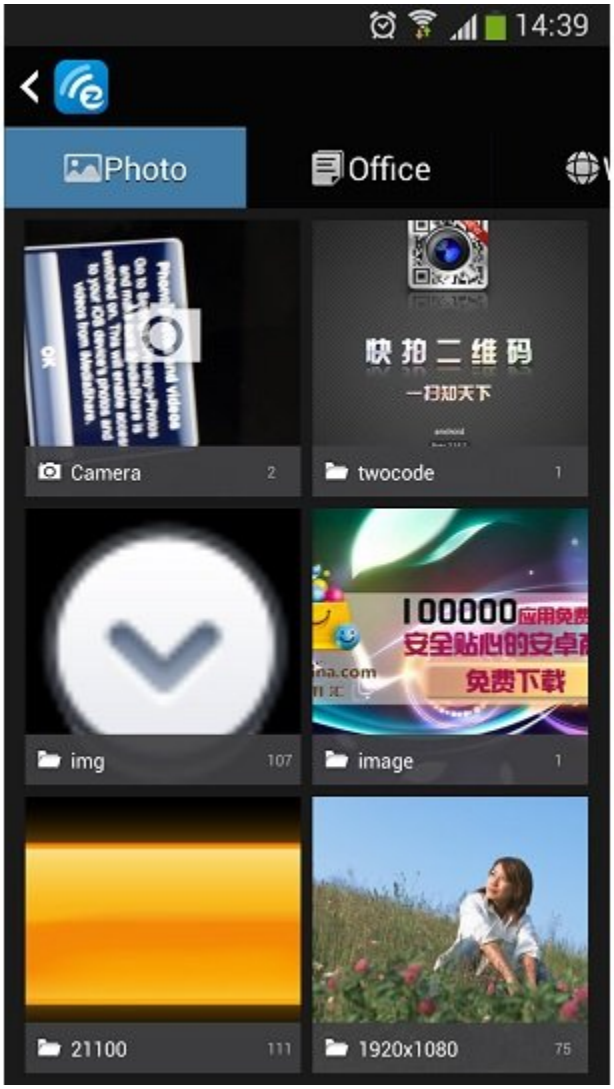
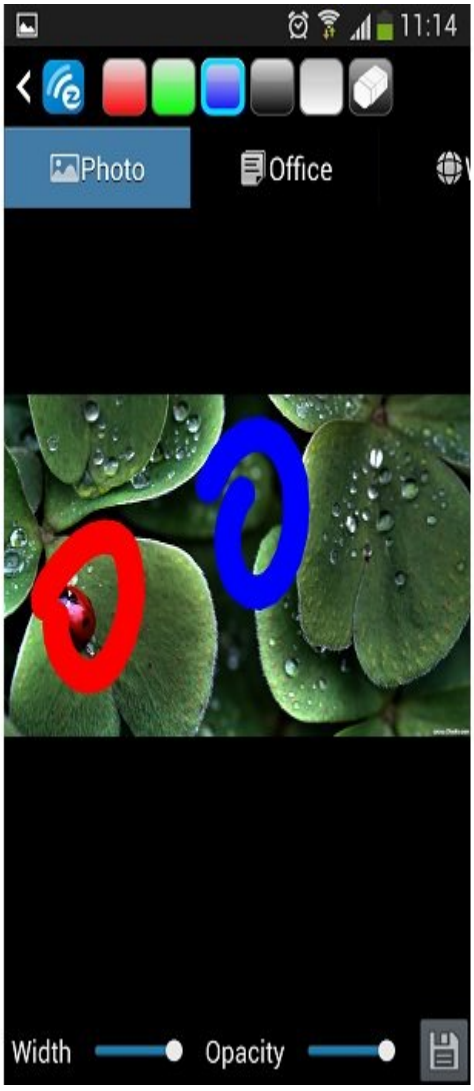
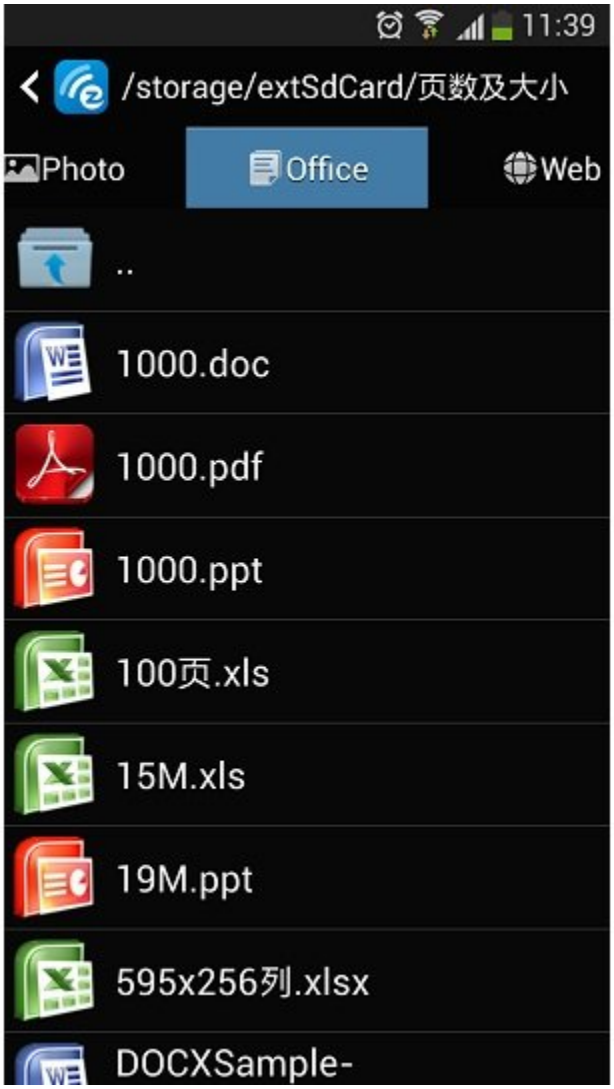


In addition, you can use the paint icon to sketch the photo and use the save icon to save the result.

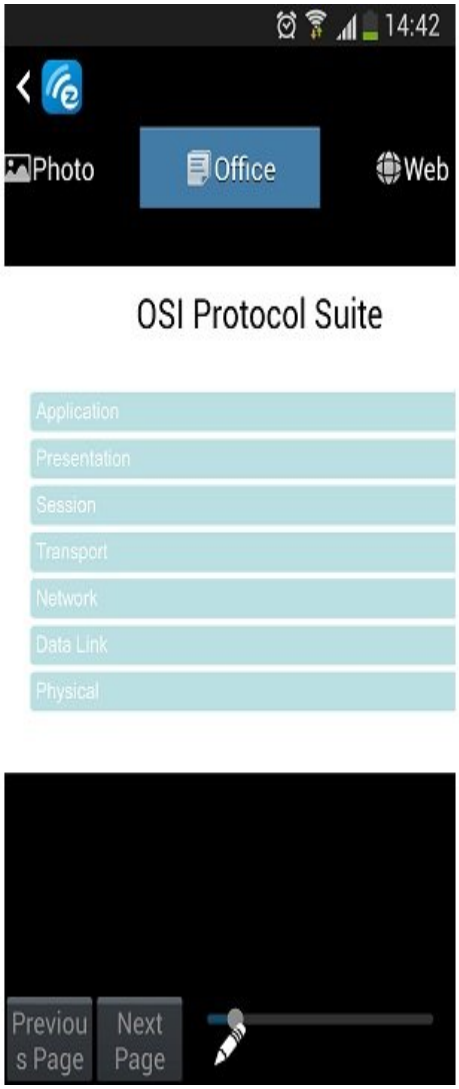


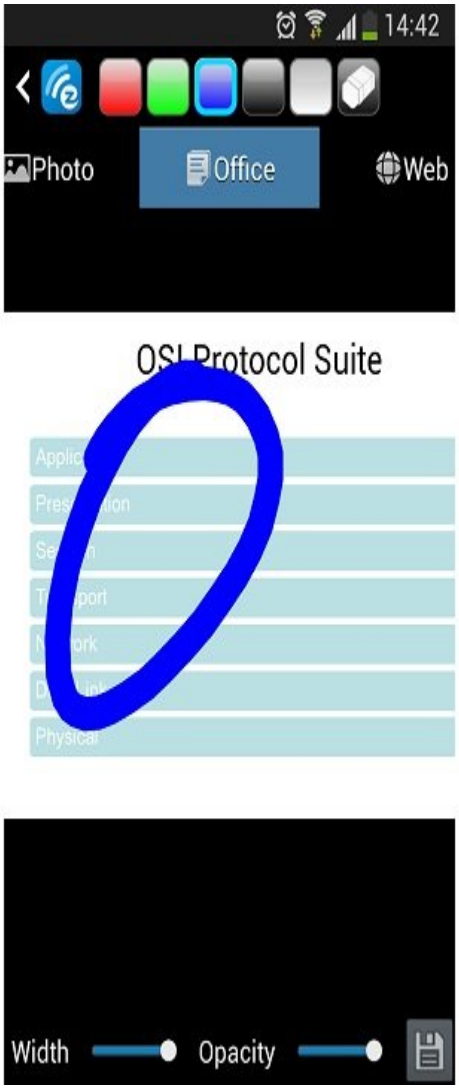
Document,through it, you can present the document in your Android device wirelessly onto the display(i.e.TV).

EZCast App supports PDF,DOC,PPT,and EXCEL format by direct clicking the document name.The Sketch function also works for document presentation.

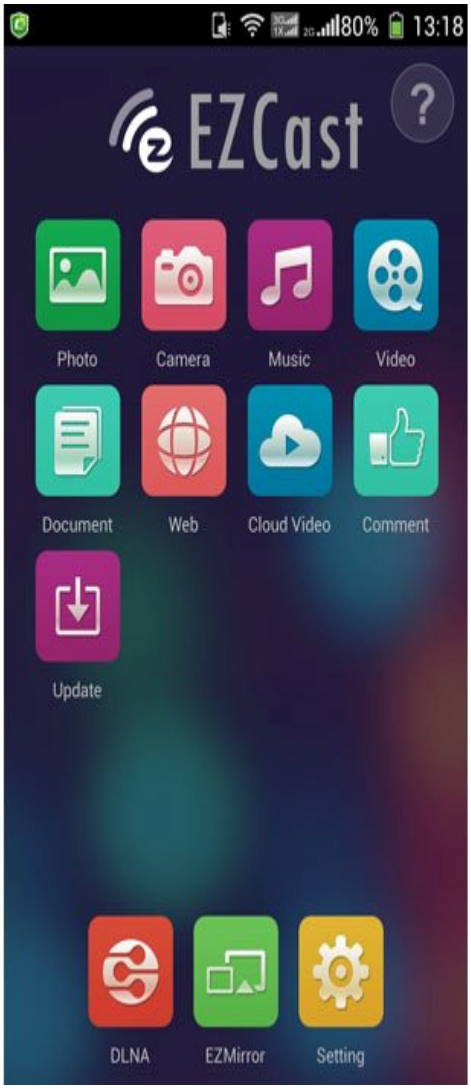


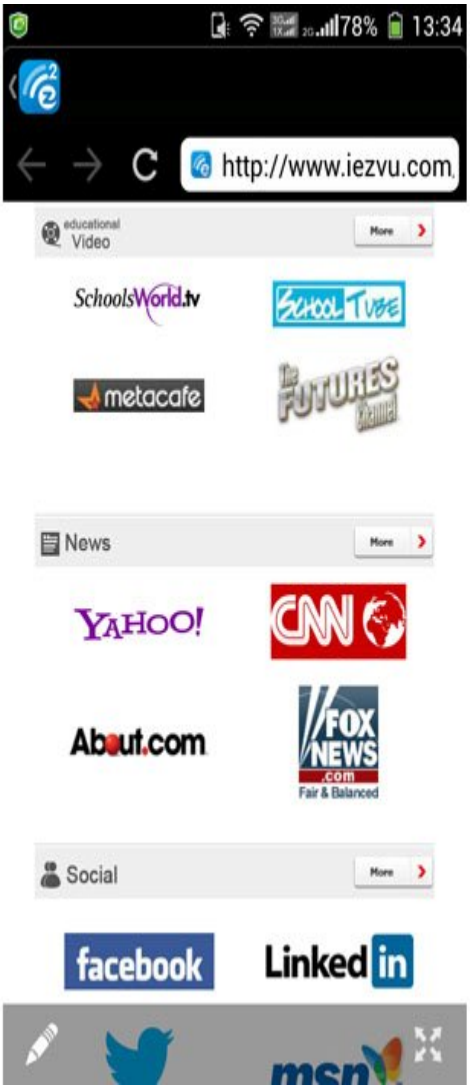
In addition, you can use the paint icon to sketch the photo and use the save icon to save the result.





Web, through it, you can surf the internet and mirror the web pages onto the display (i.e.TV) wirelessly. You can also fling the news to the display by clicking web news.





You can use the paint to sketch the web news and save.

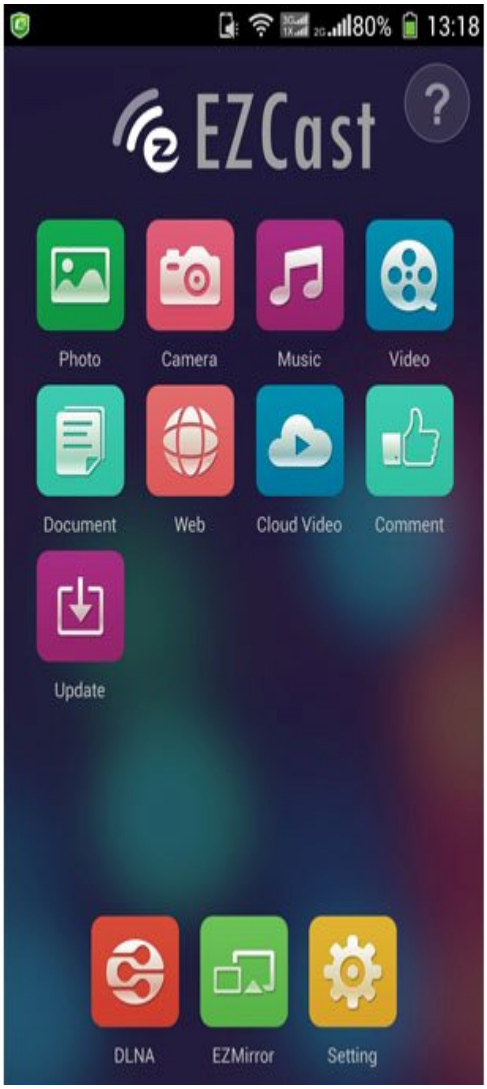
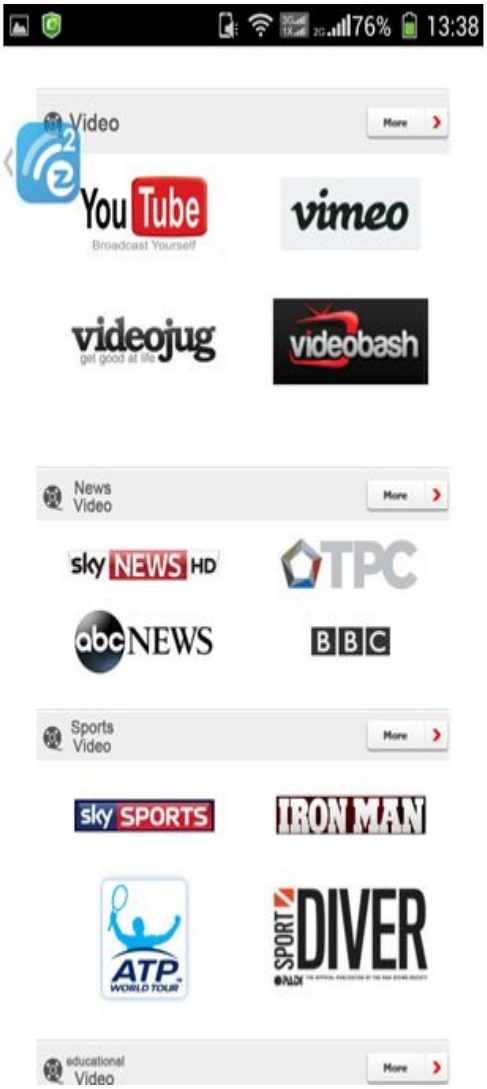
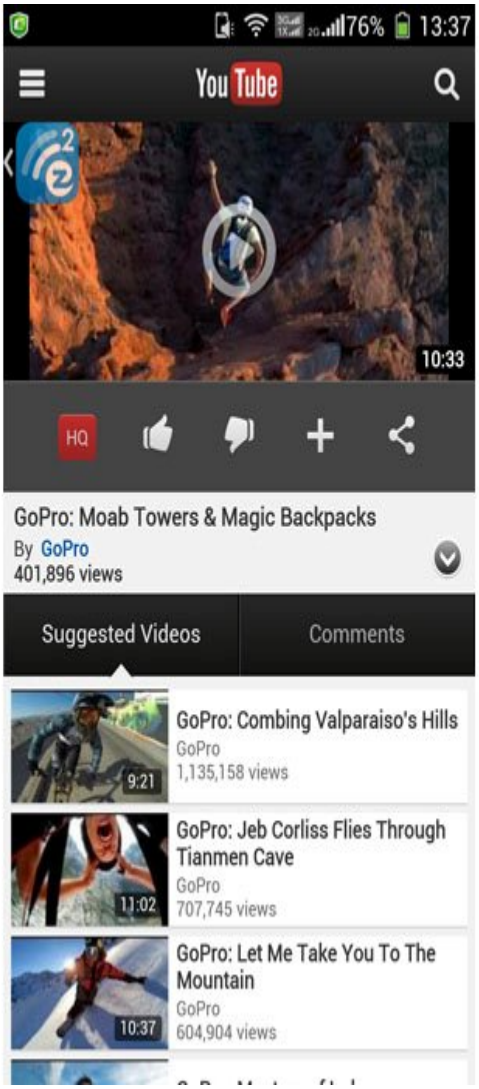
Cloud Video. You can flinging the video to the display directly by clicking the web video.

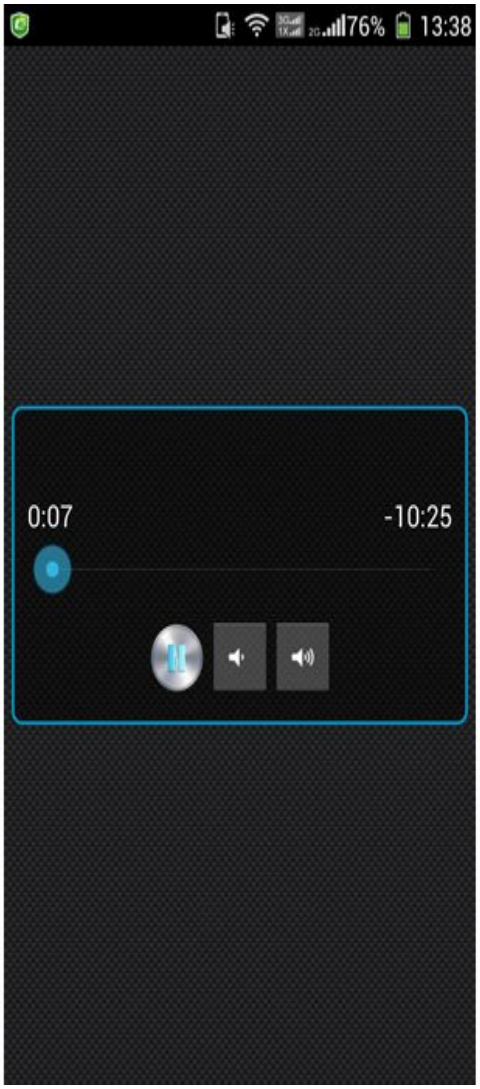




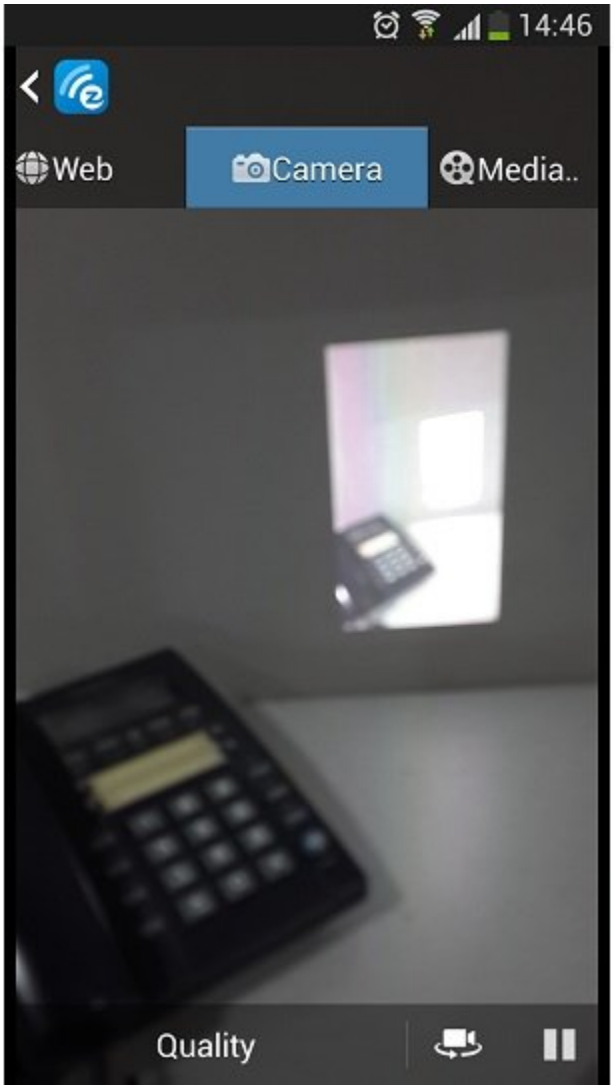
Browse youtube video and display directly onto the display device(i.e.TV)

.

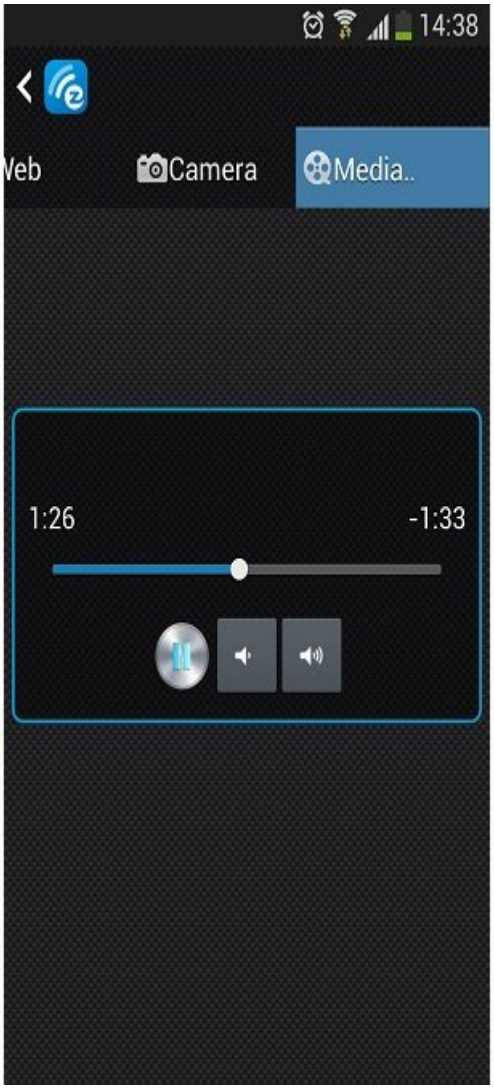




Camera, through it, you can mirror the camera photographing onto the display (i.e. TV) and you can change the “Quality” setting by clicking”Quality” and switching the front and back camera by clicking . snapshots and you can use the sketch pen to add note onto the result.



Music/Video Streaming, through them, you can stream your own music and video wirelessly to the display (i.e. TV). You can select the music and video via your favorite video browsing App.



Above all is how EZcast Mode working. We recommend to use this mode when you just want to cast local file or videos to TV.

Now let’s check how DLNA mode work.

ezCast Miracast Dongle integrates DLNA DMR (Digital Media Reader) for DLNA Application. When you select DLNA function on EZCast APP, EZCast App will automatically search all DLNA related Apps in your Android device and pop up them as a support list,launch them for selection.

It is noted that you should click to submit photo/music/video to EZCast on the selected Apps.

Here are some DLNA apps we recommend to use :

WiTV 2., Smart TV Remote Control + DLNA, Shortbeam TV Media Player, PlayTo AppleTV Roku GTV & DLNA, PlayOn TV DLNA/UPNP, Panasonic Music Streaming, mconnect player free, KX Player (Full DLNA)

DlnaPlayer, DK UPnP, Denon Cocoon, ArkMC LITE UPNP, Skifta, BubbleuPnP, SamSung galaxy Link.

In the end, let's check the Miracast Mode, most of the guys get this device for miracast, yes, mirror everything to your TV is an amazing things, however, we have to say, the miracast performance is also effected by the surroundings, if there are a lot of 2.4Ghz signal receivers or sender (such as a lot of computers or routers, pcs) near the ezCast, the performance will not good, but if you use in your home, there should be no problem.

Miracast Mode mirrors the screen onto the display (i.e. TV). ezCast also integrates Miracast functionality for the smartphone and tablet supporting Miracast. After you turn "ON" miracast, EZCast App will direct connect ezCast if your Android device is recognized. Otherwise, ezCast will wait for your Miracast connection for 60 seconds. If there is no connection in 60 seconds, EZCast will set back to normal wifi configuration, that is, AP mode with SSID and password.

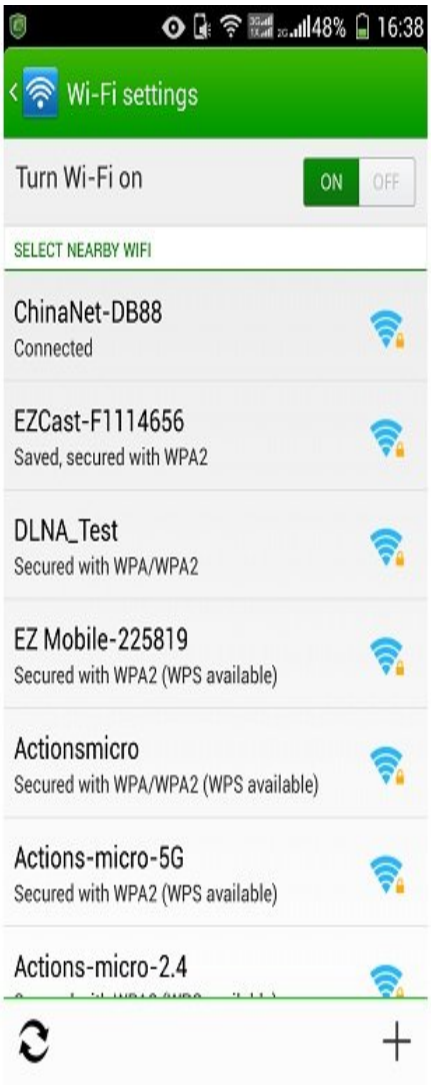
Press to continue
EZMirror
ON
1. Press to turn on EZMirror and WIFI connection w
ill be lost.
2. Connect again after EZMirror or 60 seconds.
3. Not all smartphones support EZMirror



TV will display how to connect miracast.

Usually you can open the miracast function in your android device like this:

GO TO settings, check “Display” menu, and then you will find “Wireless Display”,(this means miracast) choose “on” and make the miracast function work.
